SIDEKICK

Add two-seat capability to your track today! The J&J Sidekick has it all, including the largest cockpit in the industry!

The 2-seat go-kart has revitalized the go-kart industry. Many owners report dramatically increased revenues. Young children can now experience the excitement and adventure of go-karting with the 2-seat Sidekick from J&J Amusements. In the past, a height requirement to drive a go-kart meant youngsters had to watch the fun zip by from the sidelines. Not anymore! Youngsters can ride as a passenger with an adult driver.

As with all J&J models, the Sidekick's emphasis is on safety. The individual 4-point restraint system protects both the driver and passenger. Each harness features quick-release buckles and adjustable belts of the same quality used in race cars, aerobatic aircraft and parachutes.

With safety as one of the main concerns at J&J, we have developed a revolutionary chassis to fit under our karts. The Sidekick is no exception! Our tough steel box section monocoque chassis has been improved since its introduction in 1991. This chassis allows our padded roll bar to be frame mounted, unlike some other karts that mount the roll bar to the fiberglass body. Our standard equipped 4-point safety harness is also frame mounted for a sure, secure ride.

Like all other J&J go-karts, the Sidekick comes in many colors, with optional stock car replica graphics packages. It's enough to please the most discerning eye.

The Sidekick is sure to bring bright smiles to any track with its large size cockpit (largest in the industry), and its instant steering capability. Many double seaters are sluggish and hard to handle. Not the Sidekick...this kart is nimble like a single seater!

Visit our website at www.jjamusements.com for more exciting information including photos and color combinations.

Optional mock steering wheel for the passenger is adjustable and removable.

Sidekick shown with optional front "Nerf Bar".

SPECIFICATIONS

Length.....	82"(208cm)
Width.....	55"(140cm)
Height.....	40"(102cm)
Wheelbase.....	44.125"(112cm)
