Cog belt final drive system.
Larger fuel tank capacities available.
Stock car replica graphics packages.
Many more options available.

VIPER

The Viper brings new styling to the go-kart track. Finally, a go-kart with looks. The Viper has great style and appeal to potential drivers. Our unique body style has low slung sides and lots of leg room for the biggest drivers. This enclosed body design provides a safe environment for your customers.

At J&J, we've been building and operating go-karts for a long time. We know what it takes to keep your karts on the track day after day. Each J&J go-kart is built like a tank. Our attention to detail from the design process to the manufacturing process ensures you a kart that means business. That business is making money.

The body isn't the only refinement on this new model. From new enhanced styling and long wearing seat pads to a new fuel vent system that exceeds ASTM regulations to prevent fuel spillage, we strive to make our karts better.

Other refinements to this and all J&J kart models include new heavy duty body hold down straps, new formula D-rubber for the bumper system and a motorcycle style heavy duty throttle cable system to eliminate bent and noisy linkage.

All these refinements add up to the complete package you'll find in every J&J go-kart. Strength, reliability, style, and ease of maintenance.

Other karts better watch out...
