EBB Hour Meter Install

Electric Bumper Boat Hour Meter Installation Instructions

Remove motor cover. On the left side of the squirt pump bracket, drill 2 1/8 inch holes in the cover mount bracket. The hour meter assembly should be used as a template as shown. Use the enclosed 1/8 SS rivets to secure the hour meter to the cover mount bracket.

Remove the plastic coating from the 2 male connectors on the relay. Install the wires included in the kit on the 2 male connectors on the relay. It does not matter which wire is placed on either post as the hour meter does not have polarity. Re-install motor cover.
